

Publications

1. (with R. Schneider) Über die Bestimmung eines konvexen Körpers durch die Inhalte seiner Projektionen. *Math. Z.* **116**, 338–348 (1970).
2. Anwendungen der Maßtheorie auf Probleme über Oberflächenmaße konvexer Körper. Ph. D. Dissertation Frankfurt am Main 1971.
3. Über die Projektionkörper konvexer Polytope. *Arch. Math.* **22**, 664–672 (1971).
4. Ein Approximationssatz für konvexe Körper. *Manuscr. Math.* **8**, 335–362 (1973).
5. Über den Vektorraum der Differenzen von Stützfunktionen konvexer Körper. *Math. Nachr.* **59**, 353–369 (1974).
6. Decomposition of convex bodies. *Mathematika* **21**, 19–25 (1974).
7. On mixed volumes of nonconvex sets. *Proc. Amer. Math. Soc.* **53**, 191–194 (1975).
8. Einschachtelung konvexer Körper. *Arch. Math.* **26**, 666–669 (1975).
9. Kontinuierliche Linearkombination von Strecken. *Math. Z.* **148**, 71–84 (1976).
10. Centrally symmetric convex bodies and distributions. *Israel J. Math.* **24**, 352–367 (1976).
11. Blaschkes Problem der lokalen Charakterisierung von Zonoiden. *Arch. Math.* **29**, 655–659 (1977).
12. Centrally symmetric convex bodies and distributions II. *Israel J. Math.* **32**, 173–182 (1979).
13. Berührungswahrscheinlichkeiten für konvexe Körper. *Z. Wahrscheinlichkeitstheorie verw. Gebiete* **48**, 327–338 (1979).
14. Kinematic integral formulas for convex bodies. In: *Contributions to Geometry. Proceedings of the Geometry-Symposium in Siegen 1978*, ed. by J. Tölke and J.M. Wills, Birkhäuser Verlag Basel, 1979, pp. 60–76.
15. On surface area measures of convex bodies. *Geom. Dedicata* **9**, 299–306 (1980).
16. Eine Charakterisierung von Summanden konvexer Körper. *Arch. Math.* **34**, 283–288 (1980).
17. Zufällige Berührung konvexer Körper durch q -dimensionale Ebenen. *Result. Math.* **4**, 84–101 (1981).
18. Das gemischte Volumen als Distribution. *Manuscr. Math.* **36**, 1–18 (1981).

19. Inner contact probabilities for convex bodies. *Adv. Appl. Probab.* **14**, 582–599 (1982).
20. An application of the Central Limit Theorem for Banach-space-valued random variables to the theory of random sets. *Z. Wahrscheinlichkeitstheorie verw. Gebiete* **60**, 203–208 (1982).
21. Zonoide und verwandte Klassen konvexer Körper. *Monatsh. Math.* **94**, 73–84 (1982).
22. (with R. Schneider) Zonoids and related topics. In: *Convexity and Its Applications*, ed. by P. Gruber and J.M. Wills, Birkhäuser Verlag Basel, 1983, 296–317.
23. Stereology: A survey for geometers. In: *Convexity and Its Applications*, ed. by P. Gruber and J.M. Wills, Birkhäuser Verlag Basel, 1983, pp. 360–412.
24. Stereological results for curvature measures. *Bull. Int. Stat. Inst.* **50**, 872–883 (1983).
25. (with P. Goodey) Distributions and valuations. *Proc. London Math. Soc. (3)* **49**, 504–516 (1984).
26. (with J.A. Wieacker) Densities for stationary random sets and point processes. *Adv. Appl. Probab.* **16**, 324–346 (1984).
27. Densities of quermassintegrals for stationary random sets. In: *Stochastic Geometry, Geometric Statistics, Stereology*, ed. by R.V. Ambartzumian and W. Weil, Teubner Verlag Leipzig, 1984, pp. 233–247.
28. (with R. Schneider) Translative and kinematic integral formulae for curvature measures. *Math. Nachr.* **129**, 67–80 (1986).
29. Point processes of cylinders, particles, and flats. *Acta Appl. Math.* **9**, 103–136 (1987).
30. (with P. Goodey) Translative integral formulae for convex bodies. *Aequationes Math.* **34**, 64–77 (1987).
31. Point processes of compact sets. In: *Proceedings of the 1. World Congress of the Bernoulli Society. Sept. 1986, Tashkent*, ed. by Yu. Prohorov and V.V. Sazonov, VNU Science Press Utrecht, 1987, pp. 601–610.
32. (with J.A. Wieacker) A representation theorem for random sets. *Probab. Math. Statist.* **9**, 147–151 (1988).
33. Expectation formulas and isoperimetric properties for non-isotropic Boolean models. *J. Microsc.* **151**, 235–245 (1988).
34. Collision probabilities for convex sets. *J. Appl. Probab.* **26**, 649–654 (1989).
35. Translative integral geometry. In: *Geobild '89*, ed. by A. Hübler, W. Nagel, B.D. Ripley and G. Werner, Akademie Verlag Berlin, 1989, pp. 75–86.
36. Integral geometry, stochastic geometry, and stereology. *Acta Stereol.* **8**, 65–76 (1989).
37. Iterations of translative integral formulae and non-isotropic Poisson processes of particles. *Math. Z.* **205**, 531–549 (1990).
38. Lectures on translative integral geometry and stochastic geometry of anisotropic random geometric structures. *Atti del Primo Convegno Italiano di Geometria Integrale. Rend. Sem. Mat. Messina, Ser. II*, **13**, 79–97 (1990).

39. (with U. Betke) Isoperimetric inequalities for the mixed area of plane convex sets. *Arch. Math.* **57**, 501–507 (1991).
40. (with P. Goodey) Centrally symmetric convex bodies and Radon transforms on higher order Grassmannians. *Mathematika* **38**, 117–133 (1991).
41. (with P. Goodey) The determination of convex bodies from the mean of random sections. *Math. Proc. Cambridge Phil. Soc.* **112**, 419–430 (1992).
42. (with P. Goodey) Centrally symmetric convex bodies and the spherical Radon transform. *J. Diff. Geom.* **35**, 675–688 (1992).
43. (with P. Goodey) Integral geometric formulae for projection functions. *Geom. Dedicata* **41**, 117–126 (1992).
44. (with P. Goodey) Zonoids and generalisations. In: *Handbook of Convex Geometry*, ed. by P. Gruber and J.M. Wills, Elsevier Science Publ. Amsterdam, 1993, pp. 1297–1326.
45. (with J.A. Wieacker) Stochastic geometry. In: *Handbook of Convex Geometry*, ed. by P. Gruber and J.M. Wills, Elsevier Science Publ. Amsterdam, 1993, pp. 1391–1438.
46. The determination of shape and mean shape from sections and projections. *Acta Stereol.* **12**, 73–84 (1993). Reprinted in *IGISS Newsletter*, January 1995.
47. (with S. Campi, D. Haas) Approximation of zonoids by zonotopes in fixed directions. *Discrete Comput. Geom.* **11**, 419–431 (1994).
48. Support functions on the convex ring in the plane and support densities of random sets and point processes. *Suppl. Rend. Circ. Mat. Palermo, Ser. II*, **35**, 323–344 (1994).
49. (with P. Goodey, R. Schneider) Projection functions on higher rank Grassmannians. In: *Geometric Aspects of Functional Analysis*, ed. by J. Lindenstrauss and V. Milman, Operator Theory: Advances and Applications, **77**, Birkhäuser Verlag Basel, 1995, pp. 75–90.
50. The estimation of mean shape and mean particle number in overlapping particle systems in the plane. *Adv. Appl. Probab.* **27**, 102–119 (1995).
51. Translative and kinematic integral formulae for support functions. *Geom. Dedicata* **57**, 91–103 (1995).
52. (with P. Goodey) Intersection bodies and ellipsoids. *Mathematika* **42**, 295–304 (1995).
53. (with P. Goodey, E. Lutwak) Functional analytic characterizations of classes of convex bodies. *Math. Z.* **222**, 363–381 (1996).
54. (with H. Fallert, P. Goodey) Spherical projections and centrally symmetric sets. *Adv. Math.* **129**, 301–322 (1997).
55. On the mean shape of particle processes. *Adv. Appl. Probab.* **29**, 890–908 (1997).
56. (with P. Goodey, R. Schneider) On the determination of convex bodies by projection functions. *Bull. London Math. Soc.* **29**, 82–88 (1997).
57. (with P. Goodey, R. Schneider) Projection functions of convex bodies. In: *Intuitive Geometry*, ed. by I. Bárány and K. Böröczky, Bolyai Society Mathematical Studies **6**, János Bolyai Mathematical Society Budapest, 1997, pp. 23–53.

58. Mean bodies associated with random closed sets. *Suppl. Rend. Circ. Mat. Palermo, Ser. II*, **50**, 387–412 (1997).
59. The mean normal distribution of stationary random sets and particle processes. In: *Advances in Theory and Applications of Random Sets, Proc. International Symposium, Oct. 9-11, 1996, Fontainebleau, France*, ed. by D. Jeulin, World Scientific Publ. Singapore, 1997, pp. 21–33.
60. (with P. Goodey, M. Kiderlen) Section and projection means of convex bodies. *Monatsh. Math.* **126**, 37–54 (1998).
61. Intensity analysis of Boolean models. *Pattern Recognition* **32**, 1675–1684 (1999).
62. (with M. Kiderlen) Measure-valued valuations and mixed curvature measures of convex bodies. *Geom. Dedicata* **76**, 291–329 (1999).
63. A uniqueness problem for non-stationary Boolean models. *Suppl. Rend. Circ. Mat. Palermo, Ser. II*, **65**, 329–344 (2000).
64. Mixed measures and inhomogeneous Boolean models. In: *Statistical Physics and Spatial Statistics*, ed. by K.R. Mecke and D. Stoyan, Lecture Notes in Physics **554**, Springer Berlin Heidelberg, 2000, pp. 95–110.
65. Mixed measures and functionals of translative integral geometry. *Math. Nachr.* **223**, 161–184 (2001).
66. Densities of mixed volumes for Boolean models. *Adv. Appl. Probab.* **33**, 39–60 (2001).
67. (with D. Hug, G. Last) Generalized contact distributions of inhomogeneous Boolean models. *Adv. Appl. Probab.* **34**, 21–47 (2002).
68. (with P. Goodey) Representations of mixed measures with applications to Boolean models. *Suppl. Rend. Circ. Mat. Palermo, Ser. II*, **70**, 325–346 (2002).
69. (with D. Hug, G. Last) A survey on contact distributions. In: *Morphology of Condensed Matter*, ed. by K.R. Mecke and D. Stoyan, Lecture Notes in Physics **600**, Springer Berlin Heidelberg, 2002, pp. 317–357.
70. (with D. Hug, G. Last) Distance measurements on processes of flats. *Adv. Appl. Probab.* **35**, 70–95 (2003).
71. (with P. Goodey) Translative and kinematic integral formulae for support functions II. *Geom. Dedicata* **99**, 103–125 (2003).
72. (with D. Hug, G. Last) A local Steiner-type formula for general closed sets and applications. *Math. Z.* **246**, 237–272 (2004).
73. (with D. Hug, G. Last) Polynomial parallel volume, convexity and contact distributions of random sets. *Probab. Theory Relat. Fields* **135**, 169–200 (2006).
74. (with P. Goodey) Average section functions for star-shaped sets. *Adv. Appl. Math.* **36**, 70–84 (2006).
75. (with P. Goodey) Directed projection functions of convex bodies. *Monatsh. Math.* **149**, 43–64, 65 (Erratum) (2006).

76. Contact distributions of Boolean models. In: *Proceedings S⁴G. International Conference on Stereology, Spatial Statistics and Stochastic Geometry held in Prague, June 26-29, 2006*, ed. by R Lechnerová, I. Saxl, V. Beneš, Union Czech Math. Phys., 2006, pp. 41–51.
77. (with P. Goodey) Determination of convex bodies by directed projection functions. *Mathematika* **53**, 49–69 (2006).
78. Random sets (in particular Boolean models). In: *Stochastic Geometry. Martina Franca, Italy 2004*, ed. by W. Weil, Lecture Notes in Mathematics **1892**, Springer Berlin *et al.*, 2007, pp. 185–245.
79. (with E. Khmaladze) Local empirical processes near boundaries of convex bodies. *Ann. Inst. Stat. Math.* **60**, 813–842 (2008).
80. (with J. Hoferer, L.M. Hoffmann, J. Goebbels, G. Last, G. Kasper) Reconstruction algorithms for the internal packing density distribution of fibrous filter media based on tomographic data. *Filtration* **9**, 147–154 (2009).
81. (with R. Schneider) Classical stochastic geometry. In: *New Perspectives in Stochastic Geometry*, ed. by W.S. Kendall and I. Molchanov, Oxford Univ. Press, 2010, pp. 1–42.
82. (with P. Goodey) Generalized averages of section and projection functions. *Adv. Appl. Math.* **44**, 111–123 (2010).
83. (with P. Goodey, M. Kiderlen) Spherical projections and liftings in geometric tomography. *Adv. Geom.* **11**, 1–47 (2011).
84. (with P. Goodey) Local properties of intertwining operators on the sphere. *Adv. Math* **227**, 1144–1164 (2011).
85. (with P. Goodey) A uniqueness result for mean section bodies. *Adv. Math* **229**, 596–601 (2012).
86. (with D. Hug, I. Türk) Flag measures for convex bodies. In: *Asymptotic Geometric Analysis*, ed. by M. Ludwig *et al.*, Fields Institute Communications, Vol. **68**, Springer, 2013, 145–187.
87. (with R. Gardner, D. Hug) Operations between sets in geometry. *J. Eur. Math. Soc.* **15**, 2297–2352 (2013).
88. (with D. Hug, J. Rataj) A product integral representation of mixed volumes of two convex bodies. *Adv. Geom.* **13**, 633–662 (2013).
89. (with P. Goodey) Sums of sections, surface area measures and the general Minkowski problem. *J. Diff. Geom.* **97**, 477–514 (2014) .
90. (with D. Hug, G. Last, Z. Pawlas) Statistics for Poisson models of overlapping spheres. *Adv. Appl. Probab.* **46**, 937–962 (2014).
91. (with R. Gardner, D. Hug) The Orlicz-Brunn-Minkowski theory: A general framework, additions, and inequalities. *J. Diff. Geom.* **97**, 427–476 (2014).
92. (with E. Khmaladze) Differentiation of sets - The general case. *J. Math. Anal. Appl.* **413**, 291–310 (2014).

93. (with W. Hinderer, D. Hug) Extensions of translation invariant valuations on polytopes. *Mathematika* **61**, 236–258 (2015).
94. (with D. Hug, C. Thäle) Intersection and proximity of processes of flats. *J. Math. Anal. Appl.* **426**, 1–42 (2015).
95. Integral geometry of translation invariant functionals, I: The polytopal case. *Adv. in Appl. Math.* **66**, 46–79 (2015).
96. (with R.J. Gardner, D. Hug, D. Ye) The dual Orlicz-Brunn-Minkowski theory. *J. Math. Anal. Appl.* **430**, 810–829 (2015).
97. (with P. Goodey, W. Hinderer, D. Hug, J. Rataj) A flag representation of projection functions. *Adv. Geom.* **17**, 303–322 (2017).
98. (with P. Goodey, D. Hug) Kinematic formulas for area measures. *Indiana Univ. Math. J.* **66**, 997–1018 (2017).
99. Integral geometry of translation invariant functionals, II: The case of general convex bodies. *Adv. in Appl. Math.* **83**, 145–171 (2017).
100. (with J.Schulte) Valuations and Boolean models. In: *Tensor Valuations and their Applications in Stochastic Geometry and Imaging*, ed. by E.B. Vedel Jensen and M. Kiderlen, Lecture Notes in Mathematics, Vol. **2177**, Springer, 2017, 301–338.
101. (with E. Khmaladze) Fold-up derivatives of set-valued functions and the change-set problem. A survey. Submitted (2017).
102. (with D. Hug, J. Rataj) Flag representations of mixed volumes and mixed functionals of convex bodies. Submitted (2017), arXiv:1705.04816.
103. Grassmann measures of convex bodies. Submitted (2017), arXiv:1706.07651.
